

YEAR 3 DT – MOULDABLE MATERIALS

KNOWLEDGE ORGANISER

What have we learnt before in DT and what we will learn next?

HISTORY OF CLAY

In Year 3, we will design and make our own Stone Age jewellery.

In Year 4, we will extend our skills through our topic on the Romans and make a clay pot.

Throughout history, humans have made use of natural materials including clay to make objects. The Stone age people made jewellery out of bits of bone, tooth, tusks, shells and stones.

DIFFERENT JEWELLERY DESIGNS

The Stone age people made jewellery out of bits of bone, tooth, tusks, shells and stones.

The Bronze Age was a time when people started making tools and other things from bronze. Bronze is a metal made from a mixture of copper and tin. They would heat the metal and twist it and hammer it to make interesting shapes. Jewellery included brooches and torcs. A torc is a loop of metal and it could be worn as a bracelet or a necklace.

By the iron age, jewellery was highly decorated. Humans had learnt to melt metals at very high temperatures and use moulds and specialist tools to create highly finished jewellery. They used precious metals like gold and silver to create jewellery in different colours and with gemstones.

HISTORY OF CLAY

Clay is **the oldest known ceramic material**. Prehistoric humans discovered the useful properties of clay and used it for making pottery. Some of the earliest pottery shards have been dated to around 14,000 BC, and clay tablets were the first known writing medium.

Stone Age man made a discovery and invented pottery. They noticed that clay left out in the sun dried and became hard but was brittle and broke easily. If dried clay was left in the rain it became soggy again. Fires were used to keep people warm and to cook food. When these fires were made on top of ground which contained clay, the ground around the fire changed and became stronger. Clay vessels that were baked in fire became pottery. It is believed that the origins of pottery date back to the Ice Age. The process is still very common and used today.

TECHNIQUES FOR MOULDING CLAY

Rolling into a ball/snake

Squeezing the clay Pulling and pinching

Carving into the clay with tools.

Making holes and hollows. Smoothing with fingers. Joining clay together

Key Vocabulary

Stone Age
bracelet

Bronze Age
necklace

Iron Age
brooches

clay
hammer

copper
heat

tin

bronze
twist

roll

iron
squeeze

bone
tools

torc
cut

joining
